BPW

Industry

Manufacturing and Distribution - Automotive: components and accessories

Number of employees

45 +

Solution & services

- SYSPRO ERP
- Customer Relationship Management (CRM)
- Bill of Materials

The challenge

- Company diversifying into manufacturing to meet competitive marketing conditions
- Growing company
- Need to implement in a short space of time to deal with manufacturing
- Lack of experience in manufacturing

The benefits

- Aided transition into manufacturing
- Tracking of serial codes, full traceability
- Ability to add on more modules when required
- Fully integrated with sales and analysis software
- Increased production and delivery efficiency
- Forward planning
- Complete visibility / precise stock control

BPW axle assembly glides along with SYSPRO

Sales and distribution companies looking to extend into manufacturing would do well to look at the recent and ongoing success of BPW Limited. The NexSys customer is one of the most successful axle suppliers to the articulated trailer manufacturing sector. The company's axles and suspension systems are helping to keep goods rolling for major retailers such as Tesco, Salisbury's Asda, John Lewis and Aldi.

Case Study

BPW

To meet competitive market conditions, the company evolved from a classic sales and distribution firm into an organisation that could also assemble product in the UK. Key to this is the flexibility of its SYSPRO Enterprise Resource Planning (ERP) system and expert manufacturing guidance from NexSys.

A wholly owned subsidiary of BPW Begische Achsen KG, Europe's leading axle and suspension manufacturer for trailers and semi-trailers, BPW Limited claims the lion's share of the market. The company now has about 43% of market share and is continuing to grow. This success hinges on the ability to deliver on its promises. The morphing of the company into being a UK manufacturer as well importing finished items from Germany has added to its delivery efficiency. It has also meant the company can benefit from transport efficiency improvements and reduced transport costs.

The company's investment in SYSPRO ERP solution has no doubt aided its successful transition into manufacturing. The flexibility of the software means it grows with the company as its business evolved.

However, BPW Limited did not choose SYSPRO for its manufacturing functionality in the first instance.

"Remember - when we first spoke to NexSys we were a sales and distribution company. We selected SYSPRO because of its superior Customer Relationship Management (CRM) functionality. This supports our warranty work by allowing us to track our product serial codes," says Steve Turton, Management Accountant at BPW Limited.

"We believe it to be the best system on the market for this purpose because it allows us to track serial codes, switch the codes to the trailer manufacturer code and then finally to the end user."

This gives full traceability of our products from where they originated to the point of use. The added benefit for us is that ability to add more SYSPRO modules as and when we need them.

NexSys manufacturing expertise speeds start up

The BPW Limited assembly plant went live in the summer of 2009. Bringing the plant on stream took four months of intensive work by its project team, which included a dedicated NexSys manufacturing expert. He helped steer BPW Limited personnel in the necessary direction with them having no experience in manufacturing as their strengths were in sales and distribution.

"With help from NexSys we were able to implement the changes in a very short time. We had no manufacturing knowledge at all and now we are proficient. Without SYSPRO and NexSys support, we would not have been able to do it. In just four months, we were up and running with the plant and the software was installed and working efficiently. We were very pleased with the outcome," says Steve Turton.

"We were fortunate in being able to add manufacturing to SYSPRO when we needed it. It is much more than a standard sales and distribution

BPW

system, the addition of our manufacturing function has been seamless. We now have a fully integrated system that also integrates with our sales management and analysis software, which I'll discuss later," he adds.

The assembly plant is very successful in producing a wide range of standard axles and suspension systems and is able to produce over 70 finished products a day. This far exceeds the expectations of the German parent company, which originally forecast that the plant would produce around 30 axles a day.

Being able to forward plan using SYSPRO is enabling this to happen. "We are a build to order operation. We bring in components from Germany from which we assemble the axles and suspension systems. We have to forward plan quite a way ahead of our delivery dates to get the products to the customer on time. This takes a lot of skill and that is why SYSPRO is important; it holds the information we need and makes it visible," says Steve Turton.

"In just four months, we were up and running with the plant and the software was installed and working efficiently. We were very pleased with the outcome,"

From our customer orders we decide what is built here and what is built in Germany. The Materials Required Planning (MRP) function of the system aids the production of the Bills of Materials (BOM). This streamlines the order process for both finished product and components coming from Germany. The system also makes it easier to manage which finished products will go direct to the customer and which will come here for us to despatch," he says.

Regardless of where items are stored, SYSPRO gives complete visibility and allows precise stock control. "The software allows us to transfer stock from one warehouse to another even if the warehouse is off site. It allows us to control what is happening, keeping us in charge of when we are able to deliver to the customer," adds Steve Turton.

Dual planning, dual costing

BPW Limited clearly demonstrates not only how SYSPRO provides the ability to dual plan, but also how it provides dual costing management and control.

"With the addition of the assembly plant we operate two types of costing. Standard costing for products built in the UK and a First In First Out costing system for spare parts and for axles built in Germany. The software copes very well with both," Steve Turton.

SYSPRO also provides accurate and essential information for BPW Limited's sales analysis software. "Our sales analysis software takes the information directly from SYSPRO. This gives us the ability to monitor costs and margins by product group.

"With the addition of the assembly plant we operate two types of costing. Standard costing for products built in the UK and a First In First Out costing system for spare parts and for axles built in Germany. The software copes very well in both."

This information also lets us see the margins we make on each delivery by product. This ability to see the total cost of sales is important and gives us far greater control over how we break down our margin analysis between goods produced here and those brought in from Germany. It also allows us to analyse our spare parts sales," says Steve Turton.

"In conclusion, we are very pleased with NexSys and SYSPRO. The service and support from NexSys is excellent. The company also invests considerably in software development and each year there are important enhancements to the product to help customers get more from their systems.

We need to be at the leading edge of our own market and NexSys' continuous development of SYSPRO will help us out in front by making us more competitive," he adds.

"In conclusion, we are very pleased with NexSys and SYSPRO. The service and support from K3 is excellent."

About NexSys

NexSys is a SYSPRO elite partner, with 40+ years' experience of delivering Innovative ERP+ solutions to manufacturers and distributors throughout the UK. NexSys technologies grant organisations of all sizes maximum visibility over business-critical information, enabling decisions to be made based on accurate, reliable, real-time insight. The company provides solutions that enable agility, innovation, and competitive edge. As part of the global K3 group, NexSys has specialists that have remained loyal to the business for more than a decade. It provides project management, software development, consultancy, support and training to customers to help them realise maximum ROI.
